Page 3 (Tab 1) - Task Manager

- this will have a list of all the team's tasks. anyone can add inprnding tasks / deadlines to the list. The leadership team will be responsisbile for reviewing and updating these each week.

- each task / deadline will ask for a subteam to add it to mechanical / electrical / cad / software / outreach / marketing

- each task / deadline will have a deadline listed next to it.

- the top right needs to have a button to add a real and next to it to remove a task.

- when they click add task it should have a pop asking all relevant information

- when they click remove task it ahould show a small minus side to the left of all tasks and if they click that it will ask them to confirm kf they want to remove task. Once a task is removed it will move to the bottom, greyed out and be called an archived task.

- it should also say very small above the task who it was created by and when

- there should be an option to filter by subteam,

sort by date, sort by name
- there should be a way to toggle to calender view
- once you click on the task it should add
- once you click on a task to work on it should show a full log of everything that was done integards to that task. the user can also add their own log in regards to that task including the option to add picture, add description, (add audio description which will automatically be converted to text from the speech). based on when this log is added the time between the clock in and aubmission of the log this timestamp and person name will appear over the log. when they are about to submit the log it will say submit log and continue or the other option will be to submit log and exit application. if they exit they will get clocked put automatically. if they stay then the timestamp is recorded for time worked on that task and if they dont then a new clock starts for the next task worked on.
- once they go back to the task manager page. there will be a button on the top right to clock out

Page 3 (Tab 3) - Build Manager
 - this should have an inventory of all of our parts and skus including belt sizes, shaft sizes, gear sizes, pulley sizes, sonic hubs, etc. there should be a way to add multiple variations of the same product
- should have the fields. link, quantity, location. it should automatically pull the part number and name based on the link.
- to remove part from inventory there should be a barcode to scan and depending on the number of times you scan it, it will remove that many from inventory and add it to the version selected parts
- it should also have the option to print a barcode for that part on a 1x2 label. the 1x2 label should have the barcode and the part name. when the barcode is scanned a notification should pop up saying xxx part was removed. if the same barcode is scanned multiple times then it should increates the count of parts removed on the same notification popup. there should be an undo button on the notification to undi the

removal of the part.clicking undo once wl decrease the count removed by 1 each time it ks clicked and the notification will adjust ti say the new quantity removed even if that is 0.
- before you start scanning with a barcode scanner the human should coick into the part allocations and select which project they are working on. from there on all parts scanned will be allocated to that project.
when adding parts to stock, if the person selects add parts and scanns a barcode it will add one of that quantity back to stock. they also should have selected which project they are removing parts from.
lastly there should be a manual way to move parts to different projects without scanning the barcode.
